

## S14160/S14161 series

### Low breakdown voltage type MPPC for scintillation detector

The S14160/S14161 series achieve higher PDE (photon detection efficiency) and lower operation voltage than other MPPC to adapt for PET and radiation monitor application. They achieve small dead space in a photosensitive area with HWB (hole wire bonding) technology (Patent pending). And the gap from the photosensitive area edge to the package edge is only 0.2 mm. This package realizes the four-side buttable arrangement.

#### Features

- Higher PDE (50% at  $\lambda_p$ ,  $V_{op}=V_{BR} + 2.7 V$ )
- Lower voltage ( $V_{BR}=38 V$  typ.) operation
- Small dead space in photosensitive area
- Low afterpulses and crosstalk
- High gain:  $10^6$  order
- Excellent time resolution
- Immune to effects of magnetic fields

#### Applications

- PET (positron emission tomography)
- Radiation monitor

#### Absolute maximum ratings

Parameter	Symbol	Specification	Unit
Operating temperature*1	Topr	-40 to +85	°C
Storage temperature*1	Tstg	-40 to +85	°C
Soldering temperature*2	Tsol	240 (3 times)	°C

\*1: No dew condensation

When there is a temperature difference between a product and the surrounding area in high humidity environment, dew condensation may occur on the product surface. Dew condensation may cause deterioration in characteristics and reliability.

\*2: Reflow soldering, JEDEC J-STD-020 MSL 5a, see P.10

Note: Exceeding the absolute maximum ratings even momentarily may cause a drop in product quality. Always be sure to use the product within the absolute maximum ratings.

\*3: Photon detection efficiency does not include crosstalk and afterpulses.

\*4: Refer to the data attached for each product.

\*5: The parameter is for the S14161 series (multichannel type)

**Photon detection efficiency vs. wavelength (typical example)**

Photon detection efficiency does not include crosstalk and afterpulses.

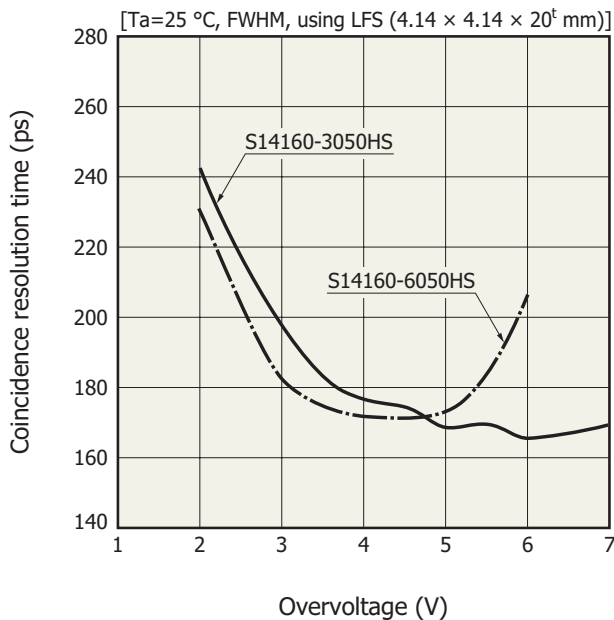

**Overvoltage vs. gain, crosstalk probability, photon detection efficiency (typical example)**

KAPDB0430EA

MPPC characteristics vary with the operating voltage. Although increasing the operating voltage improves the photon detection efficiency and time resolution, it also increases the dark count and crosstalk at the same time, so an optimum operating voltage must be selected to match the application.

**Coincidence resolution time vs. overvoltage (typical example)**

### Recommended reflow soldering conditions

KPIC80171EA

- This surface mount type package product supports lead-free soldering. After unpacking, store it in an environment at a temperature of 25 °C or less and a humidity of 60% or less, and perform soldering within 24 hours.
- The effect that the product is subject to during reflow soldering varies depending on the circuit board and reflow furnace that are used. Before actual reflow soldering, check for any problems by testing out the reflow soldering methods in advance.
- When three or more months have passed or if the packing bag has not been stored in an environment described above, perform baking. For the baking method, see the related information "Surface mount type products" precautions.

## ⚠ Precautions

- If necessary, incorporate appropriate protective circuits in power supplies, devices, and measuring instruments to prevent overvoltage and overcurrent.
